0:25 from the anatomy of information security threats to the comprehensive knowledge of cyber bar fa information security

0:32 pervades each and every environment today from an individual to Enterprise existence of security loopholes in

0:39 organization provide an easy breakthrough to the Cyber criminals to take advantage of these loopholes and

0:46 exploit the vulnerability hello viewers to get started with this course on information security we want to give you

0:54 a big picture of security issues starting from fundamentals securely surface the web how to recognize fake

1:02 websites by virtue of authoritative DNS replies as well as by verifying digital

1:08 signature in case of https protocol Hands-On DNS poisoning is demonstrated

1:15 and root cause of security threats gets assed throughout the course you shall learn that main root cause of all

1:24 information security threats is poor programming from generation to Generations more prevalent today we have

1:32 been following control C control V approach which should be discouraged client side attack proof of concept is

1:40 also demonstrated which is very critical attack Vector as securing single asset from Attack is easy but if client

1:48 himself or herself wishes to approach a malicious website we hardly have any solution

1:56 through series of proof of Concepts you should be able to deploy counter measures against these attacks and

2:04 fundamentally start practicing secure coding which is ultimately the goal of this course in this 8 we short-term course of

2:13 two credits on information security we'll try to critically understand what are different paradigms of information

2:21 and network security issues related to operating system security and database security

- 2:30 issues related to DNS poisoning have an in-depth knowledge of DNS replies specifically authoritative
- 2:38 answers and develop competencies for dealing with the client side attacks information security is the need
- 2:47 of the r in order to maintain and keep the hygiene of the world the faster we understand it the better it would be so
- 2:55 let's get started
